

A new aggregator for Drupal 7

Aron Novak (Aron Novak)
Alex Barth (alex_b)

Google Summer of Code '08

development**SEED**

WHY?

Lack of **extensibility** and **flexibility** of core aggregator led to a plethora of contrib modules.

- Aggregator2
- Feedparser
- Leech
- Planet
- SimpleFeed
- Aggregation
- FeedAPI

Problems

Incompatible features

Lost time on common
tasks

Not enough eyes on
our code

So what are we missing?

- iCal
- RDF
- NewsML
- E-mail
- Better monitoring
- External parsers: multithreaded, optimized
- Solid feed element mapping

What's in it?

- Extensibility and pluggability
 - parsers
 - processors

- Feeds are nodes:
per content type configurations

- SimpleXML based parser

Let's have a look

What's next?

You.
